

# DICE

Cut out the 15 strips below. You will assemble them so that they cover the surface of a 5x5x5 cube. Each strip wraps around one plane of the cube, touching 4 faces. Note that two strips will cross every square on the cube's surface, and that an identical shape must be produced on the cube's surface at each of these intersections. A triangle appears in the upper left corner of every face of the cube. For ease of assembly, the size of the assembled cube is approximately the size of a standard Rubik's Cube.
